# Snapshot – Domestic Macros

## Key Factors

## Where is it placed currently?

## Perspective

**GDP  
(4QFY22)**

Slowdown seen

**CPI Inflation  
(May 2022)**

CPI inflation remains high, above the RBI's comfort range of 2%-6%

**Fiscal Deficit to  
GDP (FY22)**

India's Fiscal deficit for FY22 improved to 6.71%, lower than revised budget estimate of 6.9%, primarily due to high tax collections

**RBI Policy Rate  
(June 2022)**

Hike in repo rate; Withdrawal of Accommodation Stance

**Current Account  
to GDP (Q3FY22)**

Deficit of US\$ 23.0 bn (2.7% of GDP) in Q3 FY22 against deficit of US\$ 9.9 bn (1.3% of GDP) in Q2 FY22; widening of deficit was mainly on account of higher trade deficit

# Domestic Macro Growth

## Quarterly GDP - Annualized (%)

Source: Bloomberg, RBI

## Purchasing Managers Index (PMI)

Source: Bloomberg, RBI

- India's GDP growth dragged down to 4.1% in Q4FY22 mainly by weakness in private consumption on the back of the Omicron wave

# RBI's Bi-monthly Monetary Policy – June 2022

Key Rates (%)	8-Jun-22	4-May-22
<b>Policy Rates</b>		
Policy Repo Rate	4.90% ↑	4.40%
Standing Deposit Facility (SDF)	4.65%	4.15%
Marginal Standing Facility (MSF)	5.15%	4.65%
Bank Rate	5.15%	4.65%
Fixed Reverse Repo Rate	3.35%	3.35%
<b>Reserve Ratios</b>		
Cash Reserve Ratio (CRR)	4.00%	4.00%
Statutory Liquidity Ratio (SLR)	18.00%	18.00%
<b>Source: RBI</b>		

- Policy Repo Rate hiked by 50 bps to 4.90%
- Signaled shift towards “Neutrality”.
- Further rate actions to move towards a positive real rate in near term
- the RBI had decisively shifted towards achieving its inflation target of 4%, which would require MPC to front load its policy actions and maintain a positive real rate for an extended period to establish a “sense of credibility”.
- Given the unusually uncertain environment, the RBI has understandably refrained from committing to a terminal rate for now.

**Stance : Withdrawal of Accommodation**

# Fixed Income: Outlook & Recommendations

The escalated geo-political tensions between Russia & Ukraine have increased volatility, disrupted supply chains & led to substantial increase in commodity prices. This could impart upside bias on an already high inflation.

Amidst continued geopolitical uncertainty and mounting inflation, the RBI had hiked policy rate by 40 bps in Jun 2022 MPC in line with consensus market expectations of frontloaded normalization of policy rates closer to pre-pandemic levels by Aug'2022.

Our base case is of a terminal repo rate between 6-6.5% in the next 12-15 months which we believe is largely priced in the short to medium part of the curve (2-5 years) although near term actions such as change in borrowing mix, possible RBI interventions (Operation twists) global cues could impart intermittent volatility in the near term.

The yield curve which had been considerably steep in the last 2 years has largely flattened on expectations of policy normalization. However, the expected heavy Centre/ State bond supply could weigh on the long end of the yield curve (10 year beyond) in the near term.

The envisaged terminal rate, however, might not materialize in case of a sharp slowdown of the global economy due to aggressive rate actions by the US Federal Reserve or easing of geo-political tensions in Europe.

Given the meaningful correction across the curve, investors with **above 3-years investment horizon** can contemplate staggered allocation towards **roll down strategies & actively managed duration categories**. Investors looking at **short term allocations can consider overnight/liquid/money market funds**.

## Key take away

---

- Swift change in narrative from rate hikes to risk of recession in US, Europe
- US monetary policy expectations indicate further tightening but bond markets begin to price in a reversal in CY23
- Commodities drop sharply in response
- In India, inflation outside the upper bound of the MPC target zone; rate hikes to continue this year
- High frequency data including GST collections, indicate a healthy growth trend
- There is risk to earnings estimates on account of global growth headwinds and margin volatility
- Large cap valuations are now in the comfort zone just above or below long-term averages
- Aggregate valuations serve as a reference point for asset allocation and combining the indicators we note that the pendulum has moved, albeit slightly towards equities
