I. INTRODUCTION

A. RISK FACTORS

Standard Risk Factors

1. Investment in Mutual Fund scheme units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
2. As the price / value / interest rates of the securities in which the Scheme invests fluctuate, the value of your investment in the Scheme may go up or down.
3. Past performance of the Sponsors / AMC / Mutual Fund does not guarantee future performance of the Scheme.
4. UTI Silver ETF is only the name of the scheme and does not in any manner indicate either the quality of the Scheme or its future prospects and returns.
5. The sponsors are not responsible or liable for any loss resulting from the operation of the Scheme beyond the initial contribution of Rs.10,000/- made by them towards setting up the Fund.
6. **The present Scheme is not a guaranteed or assured return Scheme.**
7. Statements / Observations made are subject to the laws of the land as they exist at any relevant point of time.
8. Growth, appreciation, IDCW and income, if any, referred to in this Scheme Information Document are subject to the tax laws and other fiscal enactments as they exist from time to time.
9. The NAVs of the Scheme may be affected by changes in the general market conditions, factors and forces affecting capital market, in particular, level of interest rates, various markets related factors and trading volumes, settlement periods and transfer procedures.
10. UTI Silver ETF is a passively managed scheme by providing exposure to silver and tracking its performance and yield as closely as possible. The scheme performance may be affected by a general decline in the price of silver. The Scheme invests in the underlying asset viz. silver regardless of its investment merit.
11. From time to time and subject to the Regulations, the Sponsors, the Mutual Funds and investment companies managed by them, their associate companies, subsidiaries of the Sponsors, and the AMC may invest either directly or indirectly in the Scheme. The funds managed by these associates, the Sponsors, subsidiaries of the Sponsors and /or the AMC may acquire a substantial portion of the scheme's units and collectively constitute a major investor in the scheme. Accordingly, redemption of units held by such funds, associates and Sponsors might have an adverse impact on the units of the scheme because the timing of such redemption may impact the ability of other unitholders to redeem their units.
12. **Scheme Specific Risk Factors:**
 - a. **Market risk due to volatility in silver prices**
The value of the Units relates directly to the value of the underlying silver held by the Scheme and fluctuations in the price of silver could adversely affect the investment value of the Units. The price of silver may fluctuate due to various factors such as: –
 - (i) Global silver supplies and demand, which is influenced by factors such as forward selling by silver producers, purchases made by silver producers to unwind silver hedge positions, central bank purchases and sales, and productions and cost levels in major silver producing countries such as the South Africa, the United States, Australia and China.
 - (ii) Investor's expectations with respect to the rate of inflation.
 - (iii) Currency exchange rates.
 - (iv) Interest rates
 - (v) Investment and trading activities of commodity funds/hedge funds.
 - (vi) Global or regional political, economic or financial events and situations.

In addition, there is no assurance that silver will maintain its long-term value in terms of purchasing power in the future. In the event that the price of silver declines, the value of investment in units in which the scheme has invested will, in general, decline proportionately.

- b. The sale of silver by AMC to pay expenses will reduce the amount of silver represented by each unit on an ongoing basis irrespective of whether the trading price of the units rises or falls in response to changes in the price of silver.
- c. The sale of the Scheme's silver to pay expenses at a time of low silver prices may adversely affect the value of the units.
- d. There may be certain circumstances that may motivate large scale sales of silver which could decrease the price of silver and adversely affect an investment in the Units.
- e. There is no assurance that an active secondary market will develop or be maintained.
- f. "UTI Silver ETF" is an Exchange Traded Fund. The concept of Exchange Traded Funds is relatively new to Indian capital markets. Trading in UTI Silver ETF could therefore be restricted due to which market price may or may not reflect the NAV of UTI Silver ETF at any point of time.
- g. Trading of UTI Silver ETF unit in the market(s) may be halted because of market conditions or for reasons that in view of SEBI or market authorities trading in UTI Silver ETF unit is not advisable. In addition trading in 'UTI Silver ETF unit is subject to trading halts caused by extraordinary market volatility and pursuant to SEBI and stock exchange(s) "circuit filter" rules. There can be no assurance that the requirements of the Market necessary to maintain the listing of 'UTI Silver ETF units will continue to be met or will remain unchanged.
- h. UTI Silver ETF units may trade at a premium / discount to the NAV due to demand/supply conditions in the market(s). Besides, any changes in the trading regulations by the Stock Exchanges or SEBI or other applicable regulations may affect the ability of the market participants to arbitrage resulting in wider premium/discount to NAV.
- i. The Scheme's silver may be subject to loss, damage, theft or restriction on access. There is a risk that part or all of the Scheme's silver could be lost, damaged or stolen. Access to the Scheme's silver could also be restricted by natural events (such as earthquake) or human actions (such as terrorist attack). Any of these actions may adversely affect the operations of the scheme and consequently an investment in units.
- j. **Impact cost risk:** The scheme may have to bear the impact cost arising from purchase and sale of Silver either when the scheme accepts/gives cash or cash equivalents in lieu of Silver.

Impact costs are implicit costs also paid by liquidity demanders to liquidity providers. Generally, the best bid and ask prices quoted in the market are for only small transactions. Larger transactions may have to be executed at even less favorable prices. The additional cost is called an impact cost. For e.g. if the ruling market price of a security is ₹500/ – one may be able to buy/sell small quantities for that price. But, if one wishes to buy/sell huge quantities he might have to pay /receive higher/lower price. The same principle applies for silver also.

- k. Changes in indirect taxes like GST, custom duties for import, etc or any other levies will have an impact on the valuation of silver and consequently the NAV of the Scheme.
- l. Redemption orders may be subject to postponement, suspension or rejection by the Trustee under certain circumstances.
- m. Conversion of underlying silver to "UTI Silver ETF" units may attract capital gains tax depending on the acquisition cost and holding period of Silver to the investor. Redemption of "UTI Silver ETF" by the AMC or sale of "UTI Silver ETF" on the Stock Exchange(s) may attract short or long term capital gain tax depending upon the holding period of the units. Moreover, converting "UTI Silver ETF" to Silver may also attract Wealth tax.

n. **Liquidity risks in physical or derivative markets impairing the ability of the fund to buy and sell Silver**
 Commodities tend to be more volatile than other instruments. This may have an impact on liquidity. Liquidity considerations may have a price basis risk. Liquidity risks may arise due to issues related to the supply chain which affects the availability of Silver. During an undetermined situation, similar to what happened during the pandemic, transportation all over the world had come to a standstill. Financial markets had experienced extreme volatility and severe losses, and trading in many instruments had been disrupted. Liquidity for many instruments had been greatly reduced for periods of time, and most commodities were in short supply resulting in illiquid markets for most commodities including silver. The lack of liquidity in the physical market may also arise due to seasonality of demand and supply or volatility prices. Lastly, government regulations including change in taxation or duties levied on silver may affect the demand and supply and may affect the liquidity.

o. **Risks associated with handling, storing and safekeeping of physical silver**
 All physical silver procured must follow the LBMA (London Bullion Market Association) guidelines as per prescribed SEBI guidelines.

Risk arises when part or all of the silver held by the Scheme could be lost, stolen or damaged and access to silver may be restricted due to natural calamities or human actions, loss or damage directly or indirectly occasioned by, happening through or in consequence of war, invasion, acts of foreign enemies, hostilities (whether war be declared or not), civil war, rebellion, revolution, insurrection, military or usurped power. Loss due to aridity, humidity, exposure to light or extremes of temperature. Hence, the Custodian maintains insurance in regard to the business on terms and conditions and the custodian is also responsible for all costs arising from the insurance policies. The custodian taking delivery on behalf of the AMC needs to ensure the weight, purity, and the source of silver as specified under the LBMA guidelines.

p. **Tracking Error:** The Fund Manager may not be able to invest the entire corpus in the same proportion as in the underlying benchmark due to various factors such as fees, expenses of the scheme, corporate action, cash balance, changes in underlying benchmark and regulatory policies which may affect the AMCs/schemes ability to achieve close correlation with the underlying benchmark. Tracking error may be accounted by the various reasons which includes expenses, cash balance to meet redemptions, time to reallocate the portfolio subsequent to changes in the underlying benchmark etc. UTI AMC will endeavor to keep the tracking error as low as possible.

“Tracking Error” i.e. the annualised standard deviation of the difference in daily returns between physical silver and the NAV of Silver ETF based on past one year rolling over data (For ETFs in existence for a period of less than one year, annualized standard deviation shall be calculated based on available data) shall not exceed 2%. The disclosure regarding the same shall be made on monthly basis on the website of the AMC.

Tracking Error may arise including but not limited to the following reasons: -

- i. Expenditure incurred by the fund.
- ii. The holding of a cash position and accrued income prior to distribution of income and payment of accrued expenses. The fund may not be invested at all times as it may keep a portion of the funds in cash to meet redemptions or for corporate actions.
- iii. Securities trading may halt temporarily due to circuit filters.
- iv. Corporate actions such as debenture or warrant conversion, rights, merger, change in constituents, etc.
- v. Disinvestments to meet redemptions, recurring expenses, etc.
- vi. Execution of large buy / sell orders
- vii. Transaction cost (including taxes and insurance premium) and recurring expenses
- viii. Realisation of Unit holders' funds

It will be the endeavor of the fund manager to keep the tracking error as low as possible. There can be no assurance or guarantee that the Scheme will achieve any particular level of tracking error relative to performance of the benchmark.

In case of unavoidable circumstances in the nature of force majeure which are beyond the control of the AMCs, the tracking error may exceed 2%, for which approval of Board of AMC and Trustees shall be taken and the same shall prominently be disclosed on the website of the AMC.

Along with the disclosure of tracking error, Silver ETF schemes shall also disclose the tracking difference i.e. the difference of returns between physical silver and the Silver ETF, on the website of the AMC on monthly basis for tenures 1 year, 3 year, 5 year, 10 year and since the date of allotment of units.

12 Portfolio Concentration Risk

To the extent that the Scheme may concentrate its investments in Silver and Silver-related instrument(s), the Scheme will therefore be subject to the risks associated with such concentration.

13 Risk factors associated with investing in Fixed Income Securities

- a. Different types of fixed income securities in which the Scheme would invest as given in the Scheme Information Document carry different levels and types of risk. Investments in corporate debt carry a higher level of risk than investments in Government securities. Further even among corporate debt, AAA/P1+ rated instruments are comparatively less risky than AA/P1 rated instruments. Accordingly, the Scheme risk may increase or decrease depending upon its investment pattern.
- b. The Net Asset Value (NAV) of the Scheme will be affected by changes in the general level of interest rates. The NAV of the Scheme is expected to increase from a fall in interest rates while it would be adversely affected by an increase in the level of interest rates.
- c. Money market instruments, while fairly liquid, lack a well developed secondary market, which may restrict the selling ability of the Scheme and may lead to the Scheme incurring losses till the security is finally sold.
- d. As zero coupon securities do not provide periodic interest payments to the holder of the security, these securities are more sensitive to changes in interest rates. Therefore, the interest rate risk of zero coupon securities is higher. The AMC may choose to invest in zero coupon securities that offer attractive yields. This may increase the risk of the portfolio. Zero coupon or deep discount bonds are debt obligations that do not entitle the holder to any periodic payment of interest prior to maturity or a specified date when the securities begin paying current interest and therefore, are generally issued and traded at a discount to their face values. The discount depends on the time remaining until maturity or the date when securities begin paying current interest. It also varies depending on the prevailing interest rates, liquidity of the security and the perceived credit risk of the Issuer. The market prices of zero coupon securities are generally more volatile than the market prices of securities that pay interest periodically.
- e. Apart from normal credit risk, zero coupon bonds carry an additional risk, unlike bonds that pay interest throughout the period to maturity, zero coupon instruments/deferred interest bonds typically would not realise any cash until maturity. If the issuer defaults, the Schemes may not obtain any return on its investment.
- f. Securities, which are not quoted on the stock exchanges, are inherently illiquid in nature and carry a larger amount of liquidity risk, in comparison to securities that are listed on the exchanges or offer other exit options to the investor, including a put option. Within the regulatory limits, the AMC may have chosen to invest in unlisted securities as permitted for investment by the scheme. Listed securities which may become unlisted in future may increase the risk in the portfolio.
- g. While securities that are listed on the stock exchange carry lower liquidity risk, the ability to sell these investments is limited by the overall trading volume on the stock exchanges and may lead to the Scheme incurring losses till the security is finally sold.
- h. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of the investments made by the Scheme. Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances leading to delays in receipt of proceeds from sale of securities. The NAV of the Units of the Scheme can go up or down because of various factors that affect the capital markets in general.
- i. As the liquidity of the investments made by the Scheme could, at times, be restricted by trading volumes and settlement periods, the time taken by the Mutual Fund for redemption of Units may be significant in the event of an inordinately large number of redemption requests or restructuring of the Scheme. In view of the above, the Trustee has the right, in its sole discretion, to limit redemptions (including suspending redemptions) under certain circumstances, as described under 'Right to Limit Redemptions' in Section 'Special Considerations', if any, on the right to freely retain or dispose of units being offered'.
- j. At times, due to the forces and factors affecting the capital market, the Scheme may not be able to invest in securities falling within its investment objective resulting in holding the monies collected by it in cash or cash equivalent or invest the same in other permissible securities / investments amounting to substantial reduction in the earning capability of the Scheme.
- k. The Scheme at times may receive large number of redemption requests, leading to an asset-liability mismatch and therefore, requiring the investment manager to make a distress sale of the securities leading to realignment of the portfolio and consequently resulting in investment in lower yield instruments.
- l. **Prepayment Risk:** Certain fixed income securities give an issuer the right to call back its securities before their maturity date, in periods of declining interest rates. The possibility of such prepayment may force the fund to reinvest the proceeds of such investments in securities offering lower yields, resulting in lower interest income for the fund.
- m. **Reinvestment Risk:** This risk refers to the interest rate levels at which cash flows received from the securities in the Schemes are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.

- n. Performance of the Scheme may be affected by political, social, and economic developments, which may include changes in government policies, diplomatic conditions, and taxation policies.
- o. Investments in money market instruments involve credit risk commensurate with short term rating of the issuers.

14 Risk Factors Associated with Investments in Exchange Traded Commodity Derivatives (ETCDs)

- a. An exchange traded commodity derivative is a derivative instrument that mimics the price movements of an underlying commodity, allowing an investor exposure to the commodity without physical purchase.
- b. Liquidity Risk: While ETCDs that are listed on an exchange carry lower liquidity risk, the ability to sell these contracts is limited by the overall trading volume on the exchanges. The liquidity of the Schemes' investments is inherently restricted by trading volumes of the ETCD contracts in which it invests. Additionally, change in margin requirements or intervention by government agencies to reduce overall volatility in the underlying commodity could lead to adverse impact on the liquidity of the ETCD.
- c. Price risk: ETCDs are leveraged instruments hence, a small price movement in the underlying security could have a large impact on their value. Also, the market for ETCDs is nascent in India hence, arbitrages can occur between the price of the physical commodity and the ETCD, due to a variety of reasons such as technical issues and volatile movement in the price of the physical good. This can result in mispricing and improper valuation of investment decisions as it can be difficult to ascertain the amount of the arbitrage.
- d. Settlement risk: ETCDs can be settled either through the exchange or physically. The inability to sell ETCDs held in the Schemes' portfolio in the exchanges due to the extraneous factors may impact liquidity and would result in losses, at times, in case of adverse price movement. Wherein the underlying commodity is physically delivered in order to settle the derivative contract, such settlement could get impacted due to various issues, such as logistics, Government policy for trading in such commodities.

15 Risk factors associated with investment in Tri-Party Repo on Government Securities or treasury bill

The mutual fund is a member of securities segment and Triparty Repo on Government Securities or treasury bill trade settlement of the Clearing Corporation of India (CCIL). All transactions of the mutual fund in government securities and in Tri-party Repo on Government Securities or treasury bill trades are settled centrally through the infrastructure and settlement systems provided by CCIL; thus reducing the settlement and counterparty risks considerably for transactions in the said segments. The members are required to contribute an amount as communicated by CCIL from time to time to the default fund maintained by CCIL as a part of the default waterfall (a loss mitigating measure of CCIL in case of default by any member in settling transactions routed through CCIL).

As per the waterfall mechanism, after the defaulter's margins and the defaulter's contribution to the default fund have been appropriated, CCIL's contribution is used to meet the losses. Post utilization of CCIL's contribution if there is a residual loss, it is appropriated from the default fund contributions of the non-defaulting members. Thus the scheme is subject to risk of the initial margin and default fund contribution being invoked in the event of failure of any settlement obligations. In addition, the fund contribution is allowed to be used to meet the residual loss in case of default by the other clearing member (the defaulting member).

CCIL shall maintain two separate Default Funds in respect of its Securities Segment, one with a view to meet losses arising out of any default by its members from outright and repo trades and the other for meeting losses arising out of any default by its members from Triparty Repo on Government Securities or treasury bill trades. The mutual fund is exposed to the extent of its contribution to the default fund of CCIL, in the event that the contribution of the mutual fund is called upon to absorb settlement/default losses of another member by CCIL, as a result the scheme may lose an amount equivalent to its contribution to the default fund.

16 Risk factors associated with Creation of Segregated Portfolio –

- a. Investor holding units of segregated portfolio may not be able to liquidate their holding till the time recovery of money from the issuer.
- b. Security comprises of segregated portfolio may not realise any value.
- c. Listing of units of segregated portfolio in recognised stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV.

B. REQUIREMENT OF MINIMUM INVESTORS IN THE SCHEME

2. Debt and money market in India**(i) Debt Instrument Characteristics:**

A Debt Instrument is basically an obligation which the borrower has to service periodically and generally has the following features:

Face Value	: Stated value of the paper / Principal Amount
Coupon	: Zero, fixed or floating
Frequency	: Semi-annual, annual, sometimes quarterly
Maturity	: Bullet, staggered
Redemption	: FV, premium or discount
Options	: Call/Put
Issue Price	: Par (FV) or premium or discount

A debt instrument comprises of a unique series of cash flows for each paper, terms of which are decided at the time of issue. Discounting these cash flows to the present value at various applicable discount rates (market rates) provides the market price.

(ii) Debt Market Structure

The Indian Debt market comprises of the Money Market and the Long Term Debt Market.

Money market instruments are Commercial Papers (CPs), Certificates of Deposit (CDs), Treasury bills (T-bills), Repos, Inter-bank Call money deposit, Triparty Repos etc. They are mostly discounted instruments that are issued at a discount to face value.

Money market instruments have a tenor of less than one year while debt market instruments typically have a tenor of more than one year

Long Term Debt market in India comprises mainly of two segments viz., the Government securities market and the corporate securities market.

Government securities includes central, state and local issues. The main instruments in this market are Dated securities (Fixed or Floating) and Treasury bills (Discounted Papers). The Central Government securities are generally issued through auctions on the basis of 'Uniform price' method or 'Multiple price' method while State Govt. are through on-tap sales.

Corporate debt segment on the other hand includes bonds/debentures issued by private corporates, public sector units (PSUs) and development financial institutions (DFIs). The debentures are rated by a rating agency and based on the feedback from the market, the issue is priced accordingly. The bonds issued may be fixed or floating. The floating rate debt market has emerged as an active market in the rising interest rate scenario. Benchmarks range from Overnight rates or Treasury benchmarks.

Debt derivatives market comprises mainly of Interest Rate Swaps linked to Overnight benchmarks called MIBOR (Mumbai Inter Bank Offered Rate) and is an active market. Banks and corporate are major players here and Mutual Funds have also started hedging their exposures through these products.

Securitised Debt Instruments – Asset securitization is a process of transfer of risk whereby commercial or consumer receivables are pooled packaged and sold in the form of financial instruments. A typical process of asset securitisation involves sale of specific Receivables to a Special Purpose Vehicle (SPV) set up in the form of a trust or a company. The SPV in turn issues financial instruments to investors, which are rated by an independent credit rating agency. Bank, Corporates, Housing and Finance companies generally issue securitised instruments. The underlying receivables generally comprise of loans of Commercial Vehicles, Auto and Two wheeler pools, Mortgage pools (residential housing loans), Personal Loan, credit card and Corporate receivables. The instrument, which is issued, includes loans or receivables maturing only after all receivables are realized. However depending on timing of underlying receivables, the average tenure of the securitized paper gives a better indication of the maturity of the instrument.

(iii) Regulators

The RBI operates both as the monetary authority and the debt manager to the government. In its role as a monetary authority, the RBI participates in the market through open-market operations as well as through Liquidity Adjustment facility (LAF) to regulate the money supply. It also regulates the bank rate and repo rate, and uses these rates as indirect tools for its monetary policy. The RBI as the debt manager issues the securities at the cheapest possible rate. The SEBI regulates the debt instruments listed on the stock exchanges.

(iv) Market Participants

Given the large size of the trades, the debt market has remained predominantly a wholesale market.

Primary Dealers

Primary dealers (PDs) act as underwriters in the primary market, and as market makers in the secondary market.

Brokers

Brokers bring together counterparties and negotiate terms of the trade.

Investors

Banks, Insurance Companies, Mutual Funds are important players in the debt market. Other players are Trusts, Provident and pension funds.

(v)Types of security issuance and eligible investors:

Issuer	Instruments	Yields % (as on 27.02.2023)	Maturity	Investors

<p>Details under Foreign Account Tax Compliance provisions (commonly known as FATCA) / Foreign Tax Laws and Common Reporting Standard (CRS)</p>	<p>FATCA is United States (US) Federal Law, aimed at prevention of tax evasion by US citizens and residents (“US persons” as defined in the applicable extant laws of the United States of America) through use of offshore accounts. FATCA provisions are part of Hiring Incentives to Restore Employment (HIRE) Act, enacted by US Legislature. Under FATCA, withholding tax may be levied on certain US source income/receipt of the Schemes of the Mutual Fund, unless they are FATCA compliant.</p> <p>FATCA obligates foreign financial institutions (FFIs), including Indian financial institutions to provide the US Internal Revenue Service (IRS) with information and to report on the accounts held by specified US Persons as well as passive NFFEs in which controlling interest is held by specified US person. The term FFI is defined widely to cover a large number of non-US based financial service providers, such as mutual funds, depository participants, brokers, custodians, as well as banks. FATCA requires enhanced due diligence processes by the FFI so as to identify US reportable accounts.</p>

	<p>The identification of US person will be based on one or more of following “US indicia”-</p> <ul style="list-style-type: none"> • Identification of the Account Holder as a US citizen or resident; • Unambiguous indication of a US place of birth; • Current US mailing or residence address (including a US post office box); • Current US telephone number; • Standing instructions to transfer funds to an account maintained in USA; • Current effective power of attorney or signing authority granted to a person with a US address; or • An “in-care of” or “hold mail” address that is the sole address that the Indian Financial Institution has on the file for the Account Holder. <p>FATCA due diligence will be applicable to each unit holder (including joint holders) irrespective of the country of residence/citizenship, and on being identified as reportable person/specified US person, all folios/accounts will be reported. Such information may include (not limited to) their identity, direct or indirect beneficiaries, beneficial owners and controlling persons. Unit holders will therefore be required to comply with the request of the AMC / Fund to furnish such information as and when deemed necessary by the AMC / Fund in accordance with the Applicable Laws.</p> <p>FATCA provisions are relevant not only at on-boarding stage of unit holders but also throughout the life cycle of investment with the Mutual Fund. Unit holders therefore should immediately intimate to the Fund/the AMC, any change in their status with respect to FATCA related declaration provided by them previously.</p> <p>In case unit holder / investor fails to furnish the relevant information and/or documentation in accordance with the Applicable Laws, the AMC / Fund reserves the right to reject the application or redeem the units held directly or beneficially and may also require reporting of such accounts/levy of withholding tax on payments made to investors. Prospective investors / Unit holders should consult their own advisors to understand the implications of FATCA provisions/requirements. The AMC reserves the right to change/modify the provisions mentioned at a later date.</p> <p>Common Reporting Standard (CRS) – The New Global Standard for Automatic Exchange of Information</p> <p>On similar lines as FATCA, the Organisation of Economic Development (OECD), along with the G20 countries, of which India is a member, has released a “Standard for Automatic Exchange of Financial Account Information in Tax Matters”, in order to combat the problem of offshore tax evasion and avoidance and stashing of unaccounted money abroad, requiring cooperation amongst tax authorities. The G20 and OECD countries have together developed a Common Reporting Standard (CRS) on Automatic Exchange of Information (AEOI).</p> <p>All Applicants whose country of tax residence is not India shall fill in the prescribed FATCA & CRS Form.</p> <p>AMC reserves right to reject the application in case the applicant / investor fails to submit information /documentation for any of the above.</p> <p>Please refer to Instructions given in the FATCA/CRS Form before filling in the particulars and for further details relating to FATCA/CRS, refer to SEBI Circular Nos. CIR/MIRSD/2/2015 dated 26th August 2015 & CIR/MIRSD/3 /2015 dated 10th September 2015 and guidelines /circulars issued by SEBI from time to time.</p>
